MediTrack: Phase Plan

MVP for the hospital pharmacy/store · Medicine master, batches & expiry, dealer purchase orders · Status as of 1 Nov 2026

Phase	Focus	Status
1	Foundation & auth	DONE
2	Masters (dealers, medicines)	NEXT
3	Batches & expiry	PLANNED
4	Orders & PDF sharing	PLANNED
5	Polish	PLANNED

1 Foundation & auth — DONE

- Project structure (monorepo: `/backend`, `/frontend`), env config, migrations
- Login endpoint, JWT middleware, role middleware, `/me` endpoint
- Frontend login page, protected routes, role-aware navigation
- Admin screen to create/deactivate staff users

2 Masters — NEXT

- Dealers CRUD (name, phone, alt phone, company)
- Medicine master CRUD with all fields, search (by brand, composition, manufacturer), filter by dealer, pagination
- A clear medicine entry form with validation; make the dealer field a searchable dropdown
- Design the medicine form/search so that a future "autocomplete from an online medicine API" can plug in (keep a small provider interface or isolated component; do **not** implement the external API now)

3 Batches & expiry — PLANNED

- Add/edit batches per medicine (batch number, expiry date, quantity)
- Dashboard: "Expired", "Expiring in 30 days", "Expiring in 60/90 days", and "Low stock" (total active batch quantity below `reorder_level`)
- Action buttons: mark batch as removed; "Add to order" shortcut that pre-fills a draft order for the medicine's default dealer
- In-app notifications (badge/banner) for expiring/expired batches
- Daily backend job (simple goroutine ticker) that flips past-expiry active batches to `expired`
- Email/WhatsApp notifications are future work

4 Orders & PDF sharing

PLANNED

- Create order: choose dealer, add medicines (pre-filled with PTR and offer remarks), set quantities, add notes
- Order list with status filter; status flow `draft → sent → committed → received` (or `cancelled`). When status becomes committed, store `committed_at` (date) and show it.
- "Generate PDF" and "Share" buttons. The PDF includes hospital name/logo (configurable), date, dealer name and contact, a table of S.No / Brand / Composition+Strength / Manufacturer / Pack / Qty / PTR / Offer, notes, and a signature line.
- Share via Web Share API with the PDF file; fall back to download + `wa.me` text link
- Group by dealer: if the user selects items from several dealers, create one order/PDF per dealer

5 Polish

PLANNED

- Loading / empty / error states, toasts, confirm dialogs
- Basic tests for critical backend handlers (auth, permissions, expiry logic)
- README with local setup and deployment steps for Neon + Render + Vercel

Not in MVP: tracking sales or dispensing. Stock quantity is only what is entered per batch.
